Purpose Of App:

The Cloud Kitchen Management App is a software solution aimed at optimizing inventory management and delivery operations for ghost kitchens. The app will streamline the process of tracking inventory levels, managing orders, coordinating deliveries, and analyzing data to improve efficiency and customer satisfaction.

The Cloud Kitchen Management App aims to revolutionize inventory management and delivery operations for ghost kitchens, enhancing efficiency, productivity, and customer satisfaction. The app will deliver a robust, scalable, and user-friendly solution tailored to the unique needs of ghost kitchen businesses.

Design Inspiration:

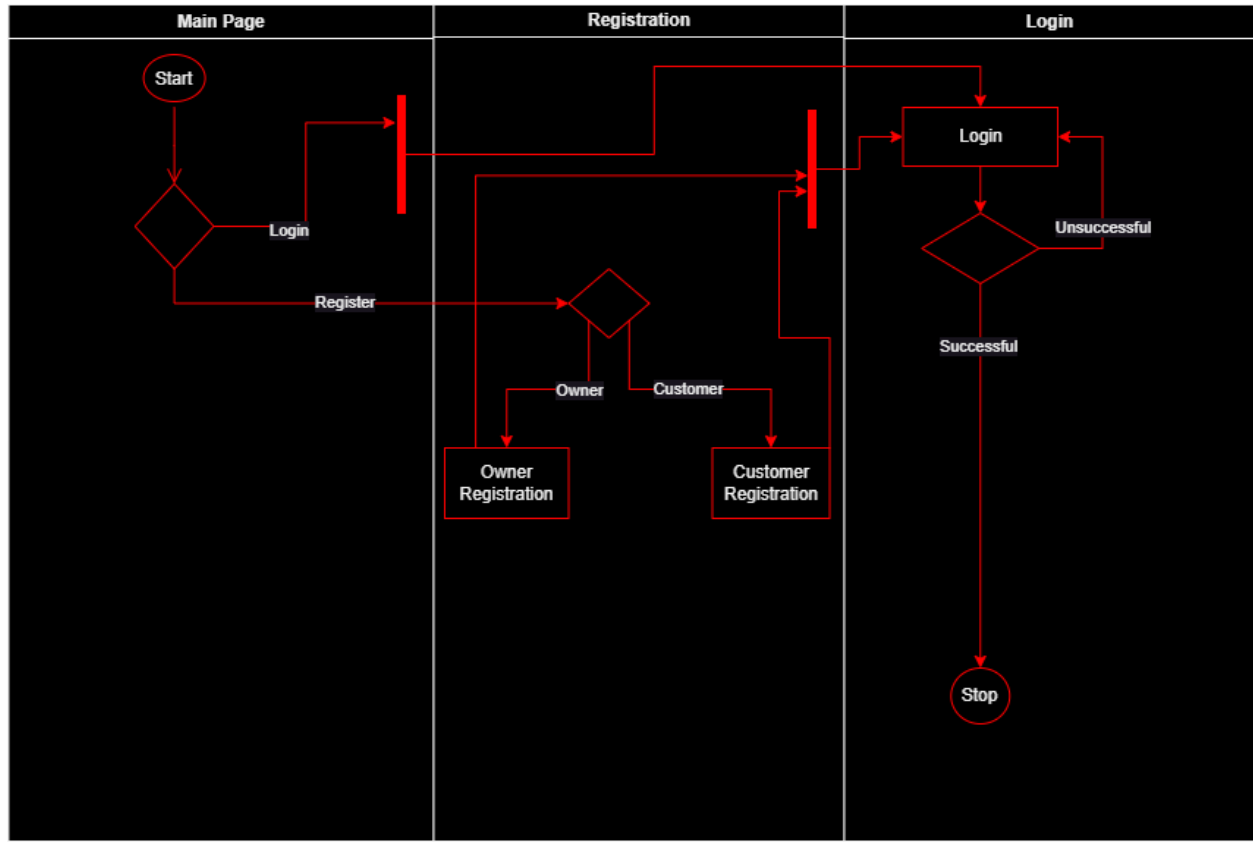

Our app's design inspiration draws from the user-centric features of leading food delivery platforms like Foodpanda and the renowned efficiency of KFC's online app. Foodpanda's seamless order management system and intuitive user interface influenced our approach to creating an easy-to-navigate app that makes ordering a breeze. Meanwhile, KFC's streamlined backend processes, which ensure swift order preparation and delivery, informed our design for robust operational management. By combining these elements, we're developing an app that offers both customers and kitchen staff an efficient and enjoyable experience. Our goal is to create an intuitive, reliable, and efficient platform for ghost kitchens, ensuring that every order is processed smoothly from start to finish.

Diagrams Used:

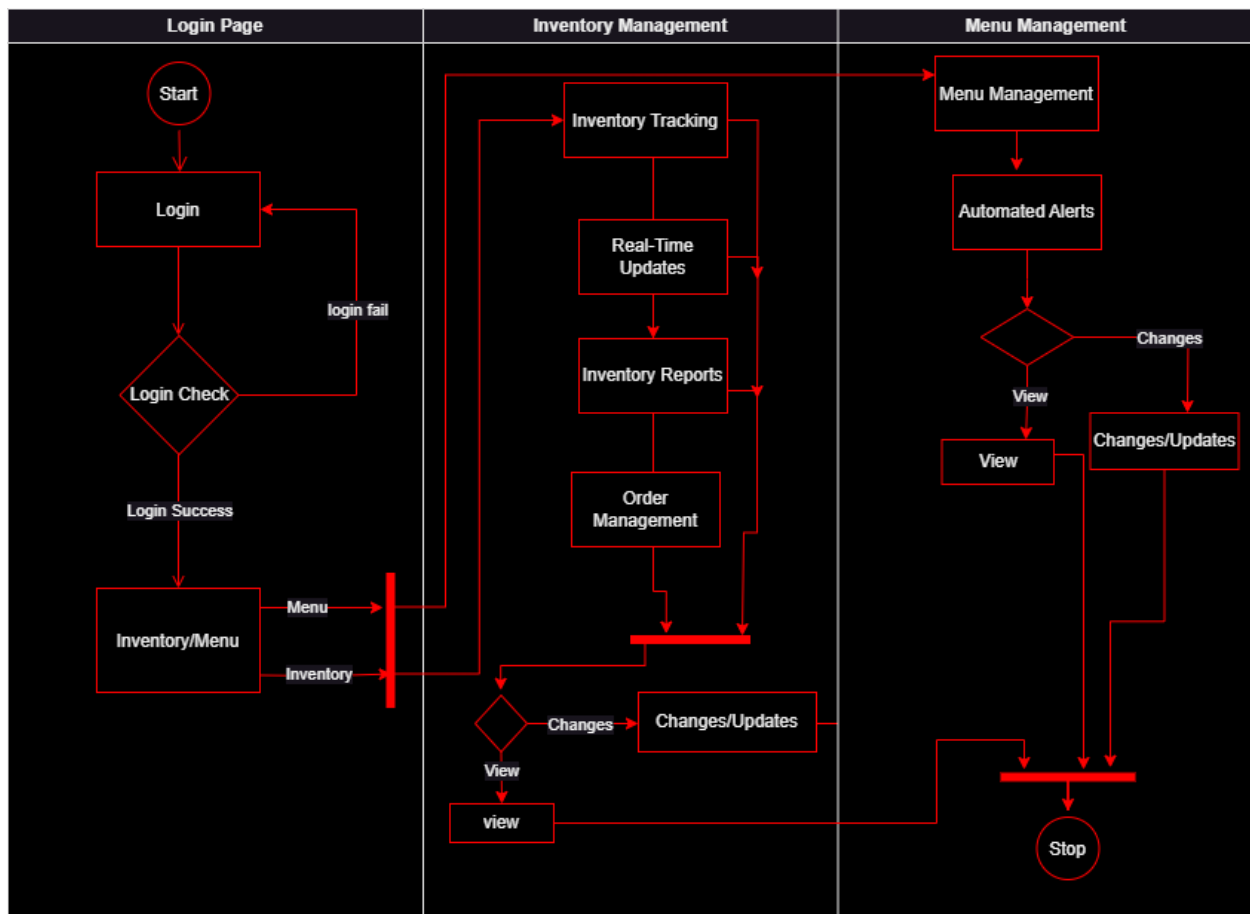

1. **Activity Diagrams:** which show the activities involved in a process or in data processing.
2. **Use Case Diagrams:** which show the interactions between a system and its environment.
3. **Sequence Diagrams:** which show the interactions between actors and the system and the system components.
